

Graded Assignment 2 Population and climate change

This is a graded assignment and an additional opportunity to improve your grade in this class. The assignment has four components each one of them addressed in half a page for a total of two pages document that you will submit in canvas as a pdf.

This assignment focuses in the interconnections between climate change and human population.

1. Watch the video lecture from Populations Connections posted on canvas.. Use the information from her presentation and discuss in one paragraph (10 lines or more) per topic, each the following topics. Use specific details/facts from her presentation.

- Relationship between human population growth and natural resources
- Relationship between consumption and climate change
- Role of women and education in addressing climate change

2 Visit population connection website at this link and from the list of **Why population** read at least three topics of your interest. Discuss in one paragraph (10 lines or more) per topic in your own word a summary of each of the topics with your reaction.
